

REMARKS

The specification has been amended to add two formulas to page 10. Similarly, claim 9 has been amended to include the same two formulas. Both formulas are illustrated by Fig. 4. Therefore, the addition of the two formulas do not add any new material to the application. Similarly, a replacement drawing sheet 2 has been enclosed that adds the term λ_r as the output from the block labeled 26 in Fig. 4. The term was inadvertently omitted from the original figure and the addition thereof does not add any new matter. In view of the amendments, it is believed that the application is in condition for substantive examination.
